

ISE CERTIFICATION COURSE DETAILS

NAME:	LIKITHA P	USN:	4AL16IS024
SEMESTER:	8 TH SEM	MENTOR:	SHARAN LIONAL PAIS
COURSE NAME:	NETWORKS CONCEPT AND PROGRAM	DATE:	18/05/2020

SCREENSHOT:

BRIEF REPORT:

1). The Open Systems Interconnection model (OSI model) is a conceptual model that characterizes and standardizes the communication functions of a telecommunication or computing system without regard to its underlying internal structure and technology. Its goal is the interoperability of diverse communication systems with standard communication protocols. The model partitions a communication system into abstraction layers.

2). A layer serves the layer above it and is served by the layer below it. For example, a layer that provides error-free communications across a network provides the path needed by applications above it, while it calls the next lower layer to send and receive packets that constitute the contents of that path

3). The model is a product of the Open Systems Interconnection project at the International Organization for Standardization (ISO).
