BRIEF REPORT: (POINT-WISE)

1). An *RSS* document is an XML file which can be used to publish blog entries and news. The format of the XML file is specified via the RSS specification.

2). In Android, you can use SmsManager API or devices Built-in SMS application to send SMS's.

3). A service is an <u>application component</u> that can perform long-running operations in the background. A service and it doesn't provide a user interface. Once started, a service might continue running for some time, even after the user switches to another application. Additionally, a component can bind to a service to interact with it and even perform interprocess communication (IPC). For example, a service can handle network transactions, play music, perform file I/O, or interact with a content provider, all from the background.
